NOTIFICATION DATE	DELIVERY MODE
-------------------	---------------

08/30/2010

ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Office Action Summary	Application No. 10/581,035	Applicant(s) OHMI ET AL.	
	Examiner MICHAEL H. CALEY	Art Unit 2871	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 June 2010.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 and 26-32 is/are pending in the application.
- 4a) Of the above claim(s) 12-22 and 26-31 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11 and 32 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 May 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 9, and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Chino (U.S. Patent Application Publication No. 2004/0027056).

Regarding claim 1, Chino discloses an active matrix display device having a plurality of thin film transistors disposed in a matrix on an insulating substrate and wiring connected to these thin film transistors;

wherein;

said active matrix display device (Figures 1-2; Paragraphs [0051]-[0052]) comprises a flattening layer (element 9) surrounding said wiring (e.g. element 37), a surface of said wiring and a surface of said flattening layer forming substantially the same plane (Figures 2-4), and

said active matrix display device further comprises an interlayer insulating film (59) on the plane formed by the surface of said wiring and the surface of said flattening layer, and a pixel electrode (20) on said interlayer insulating film.

Art Unit: 2871

Regarding claim 2, Chino discloses said wiring as including gate wiring (35), source wiring (41), and drain wiring (37) being respectively connected to source and drain electrodes of the thin film transistor,

one of said source wiring and drain wiring constituting signal lines (37; Paragraph [0060]) adapted to supply signals to the thin film transistors while the other is connected to pixel electrodes (20; Paragraphs [0060]-[0061]),

and wherein the flattening layer surrounds the source electrodes, the drain electrodes, the source wiring, and the drain wiring (Figure 2),

surfaces of said source electrodes, said drain electrodes, said source wiring, and said drain wiring, and the surface of said flattening layer forming substantially the same plane (Figure 2).

Regarding claim 9, Chino discloses the insulating substrate as a substrate having a surface covered with an insulator (Figure 2 element 55).

Regarding claim 11, Chino discloses the display device as an organic EL display device (Paragraph [0098]).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2871

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chino in view of Furusawa (U.S. Patent Application Publication No. 2004/0005739).

Regarding claims 3-5, Chino fails to disclose details of the flattening layer. Furusawa, however, teaches an analogous flattening layer as a photosensitive resin composition comprising an inorganic substance (Furusawa: element 20 Paragraphs [0082], [0083]).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the flattening layer as a photosensitive resin composition comprising an inorganic substance. One would have been motivated to form the flattening layer as proposed to enable formation of an insulating layer preventing deterioration of the thin film transistor and according to conventional means (Paragraphs [0082], [0083]).

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chino in view of Odemura (JP 2001-188343A).

Art Unit: 2871

Regarding claim 6, Chino fails to disclose the specific flattening layer. Odemura, however, teaches an alkali-soluble alicyclic olefin resin insulator composition having a radiation sensitive component (abstract).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the flattening layer from the proposed resin composition. One would have been motivated to form the flattening layer from the resin composition to benefit from its known advantages for display use, such as high transparency, flatness, heat resistance, and chemical resistance (Odemura: abstract).

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chino in view of Furusawa and Ishihara et al. (U.S. Patent Application Publication No. 2002/0012080 "Ishihara").

Chino fails to disclose an organic substance in the electrodes and wiring. Furusawa discloses the source wiring and the drain wiring as each containing an organic substance (Paragraphs [0095], [0096]), but fails to disclose the source electrodes and drain electrodes as containing an organic substance. Ishihara, however, teaches replacing amorphous silicon source and drain electrodes with an organic semiconductor film (Paragraphs [0003] and [0036]).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the source and drain electrodes to contain an organic substance. One would have been motivated to form the source and drain electrodes with an organic substance to reduce the TFT panel production cost according to conventional means (Ishihara: Paragraph [0003]).

Art Unit: 2871

Claims 8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chino in view of Tanaka et al. (U.S. Patent No. 6,933,180 "Tanaka").

Chino fails to disclose the display device as having a transparent substrate and as formed as a liquid crystal display. Tanaka, however, teaches TFT array substrates as interchangeably implemented as for an organic EL display or a liquid crystal display (abstract; Column 1 lines 7-11) and the substrate as transparent (Column 4 lines 58-59).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to implement the TFT array substrate as a liquid crystal display. One would have been motivated to form the display as a liquid crystal display to benefit from known advantages such as improved longevity and reduced production expense. Further, one would have been motivated to form the substrate to be transparent for allowing light from a light source, such as a backlight, to illuminate the display according to conventional means.

Claim 32 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chino in view of Tanaka and in further view of Sakamoto et al. (U.S. Patent Application Publication No. 2003/0095217 "Sakamoto").

Chino fails to explicitly disclose the flattening layer as transparent. Sakamoto, however, teaches a transparent display insulating layer to allow light from a backlight to be transmitted through the liquid crystal layer and toward the viewer (Paragraph [0070]).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to implement the flattening layer as a transparent layer. One would have been motivated to form the flattening layer as a transparent layer to allow light to be passed.

Art Unit: 2871

Response to Arguments

Applicant's arguments with respect to claims 1-11 and 32 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL H. CALEY whose telephone number is (571)272-2286. The examiner can normally be reached on M-F 6:00 a.m - 2:30 p.m..

Art Unit: 2871

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on (571)272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
